

For the conceptual model of the system, you will develop two different kinds of models that we have discussed in class: Class Diagrams and Sequence Diagrams in the Analysis stage of modeling (these are in Chapter 5 of the textbook). Each model should have a graphical representation (the UML diagram), along with any narrative explanation the reader needs to understand the model. You may organize these models in a single separate document in some reasonable fashion **or include these models under Appendix B in your updated SRS document (assuming Appendix A holds your Use Case models).**

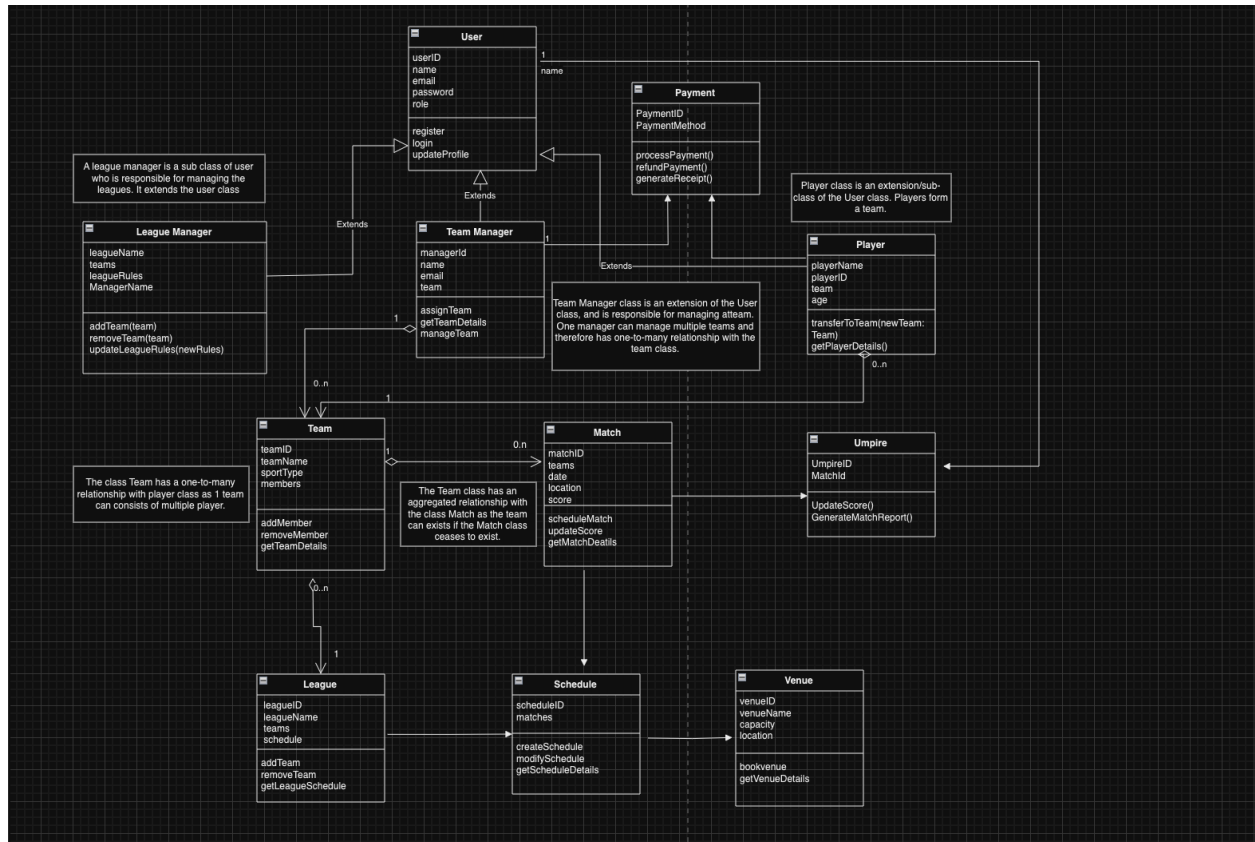

System model - context (context diagram)

Use Case Diagrams

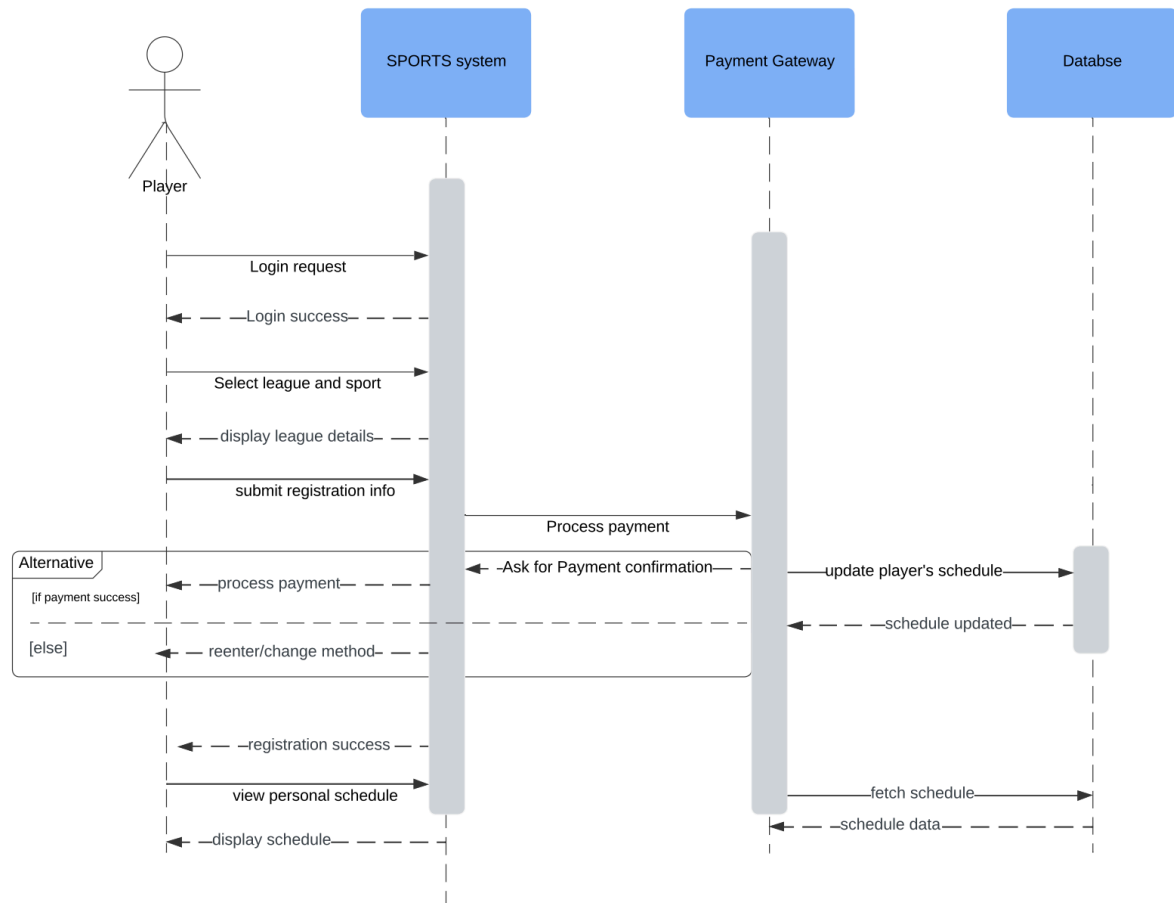

System model - structure (structure/class diagrams)

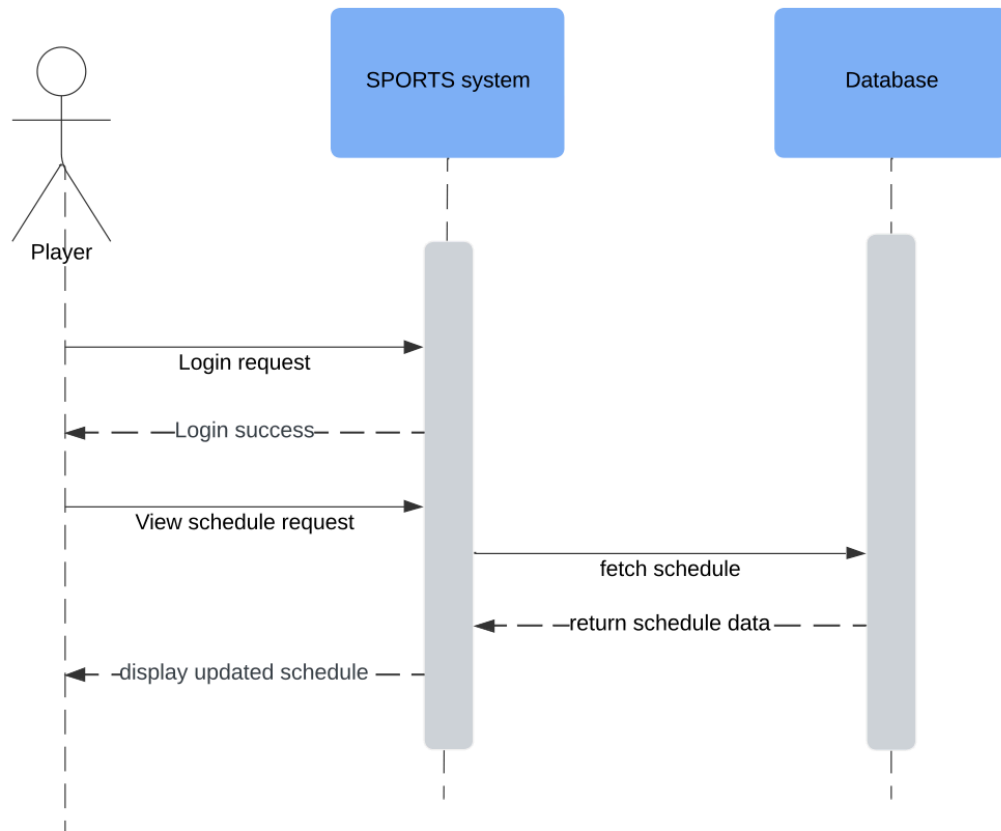

System model - interactions (interaction diagrams)

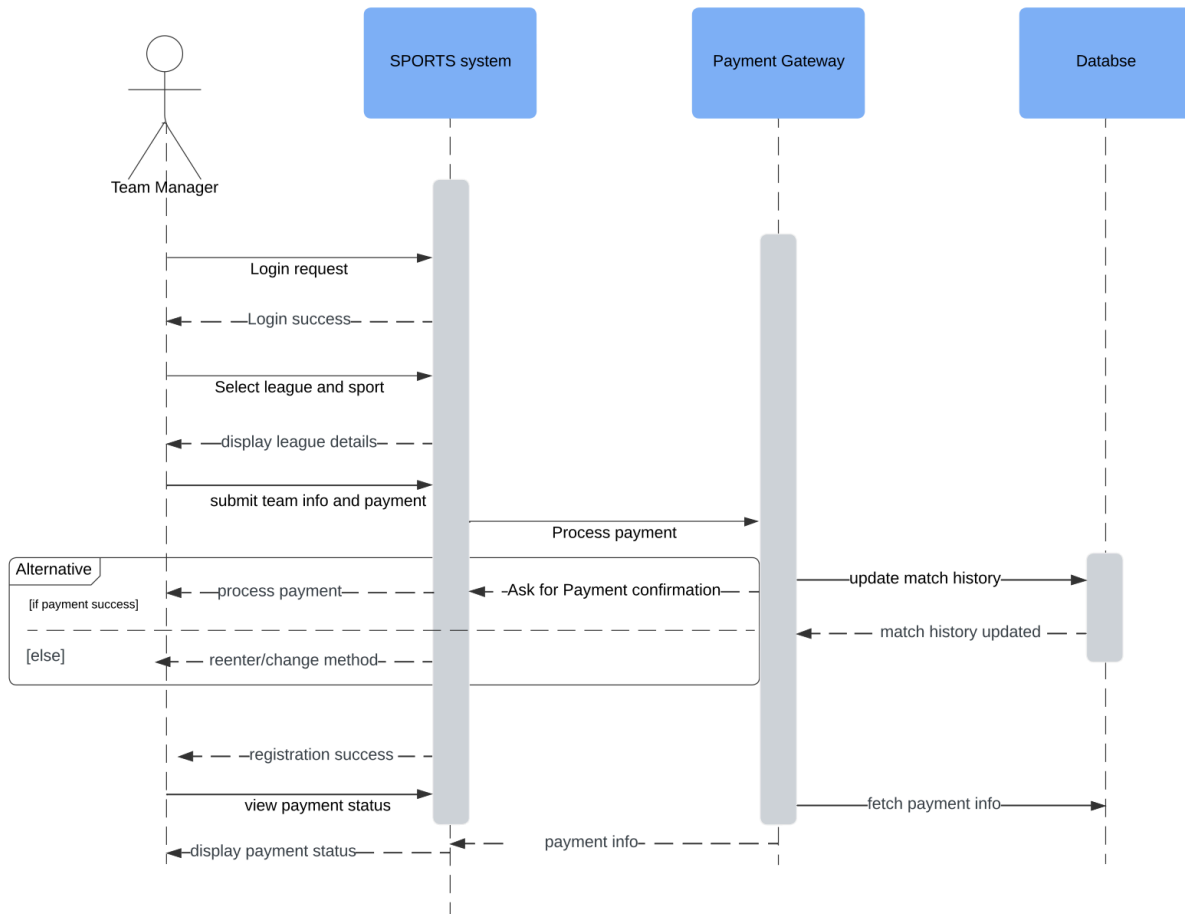

Use case 1: Players Register for a League or Class

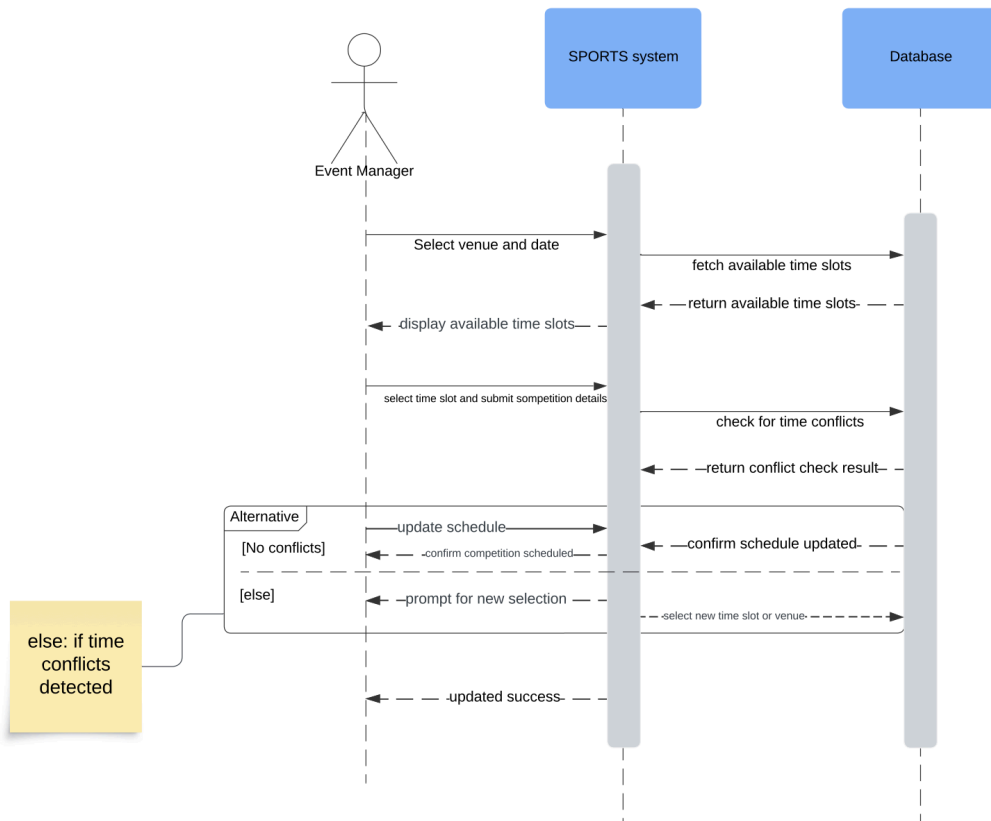

Use case 2: Players View Personal Schedule

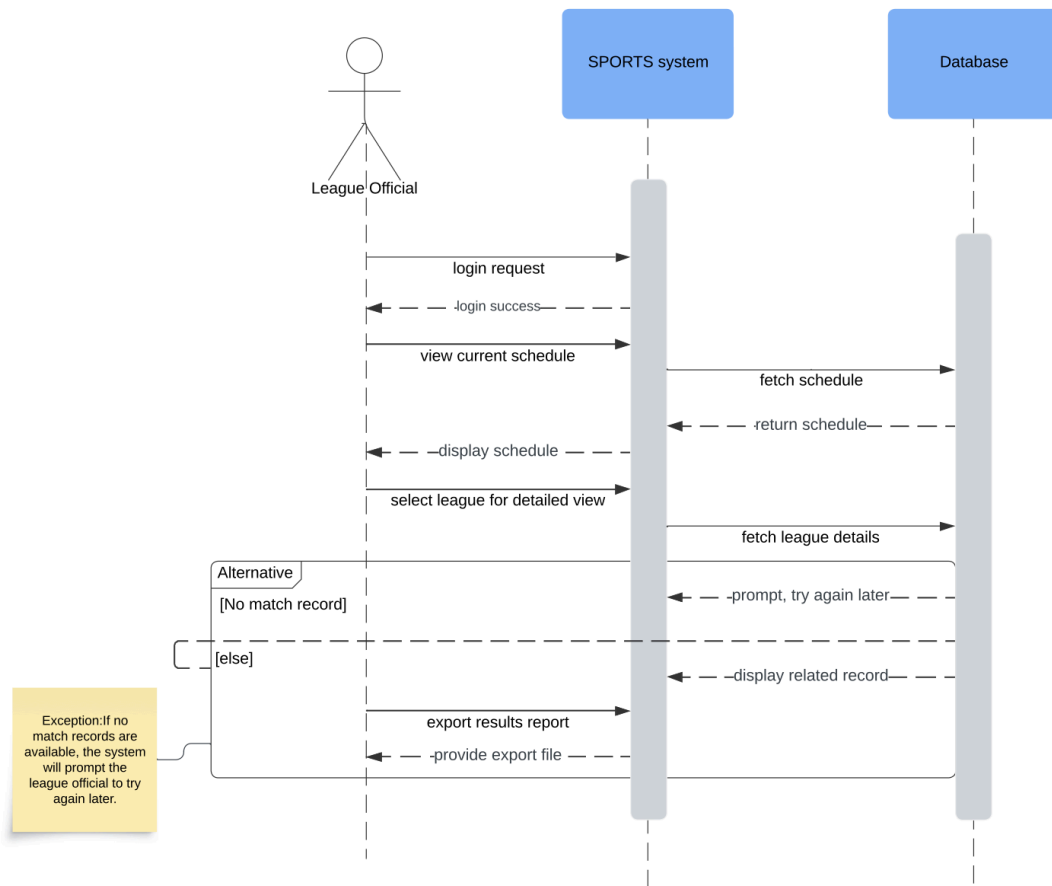

Use case 3: Team Manager Register Team and Manage Payments

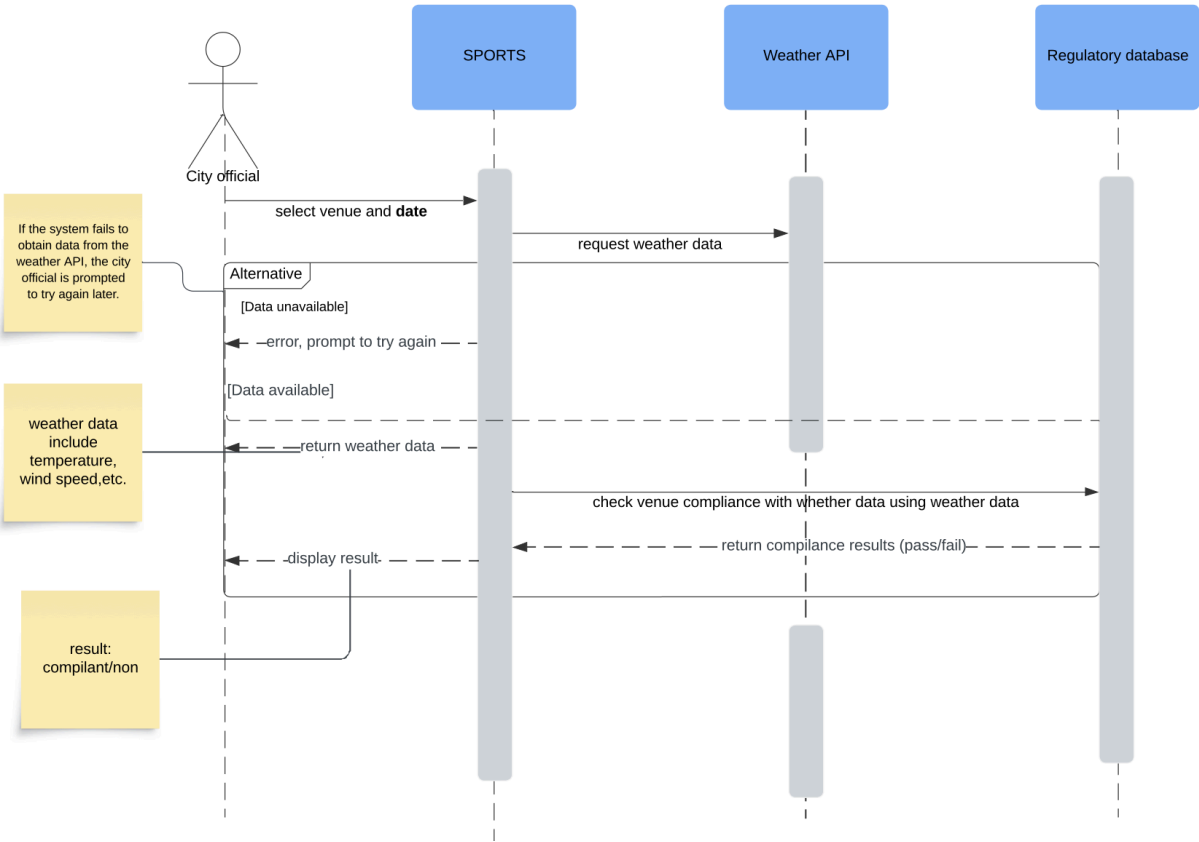

Use case 4: View and Manage Venue Schedule

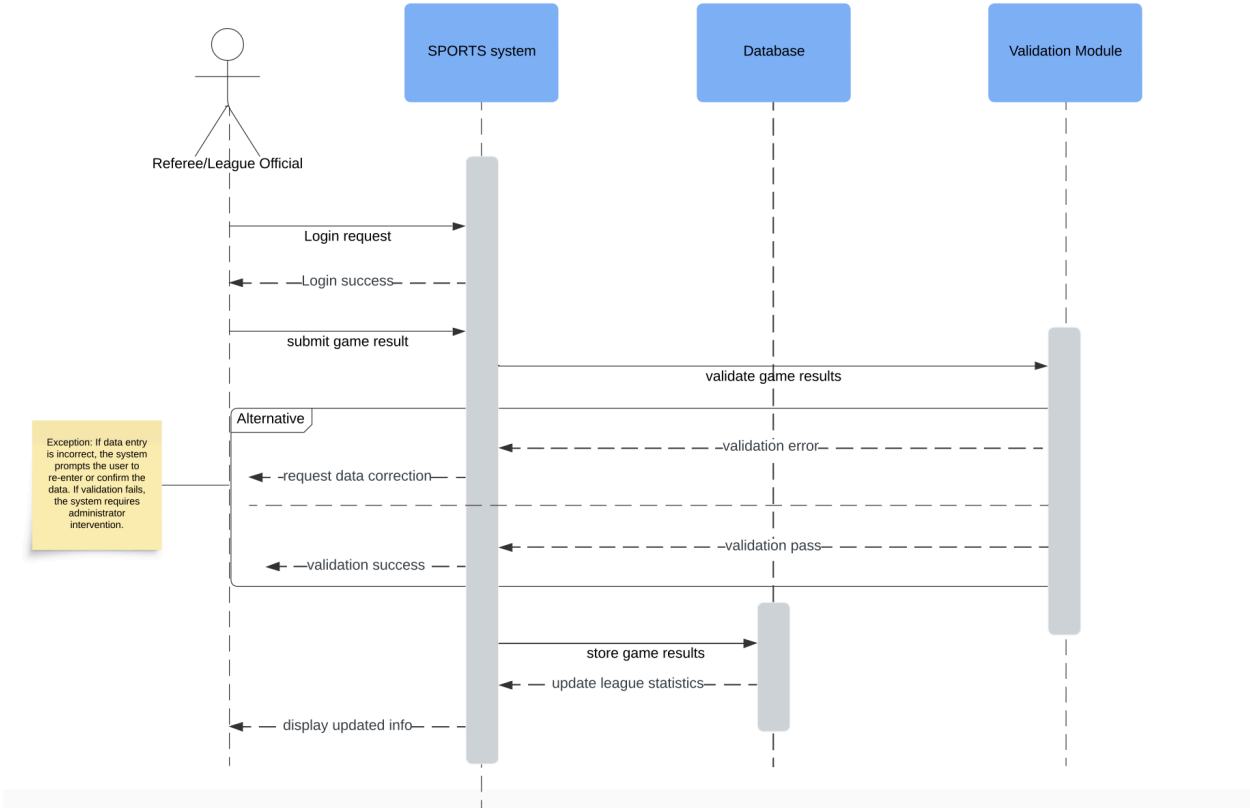

Use case 5: View League Schedule and Standings

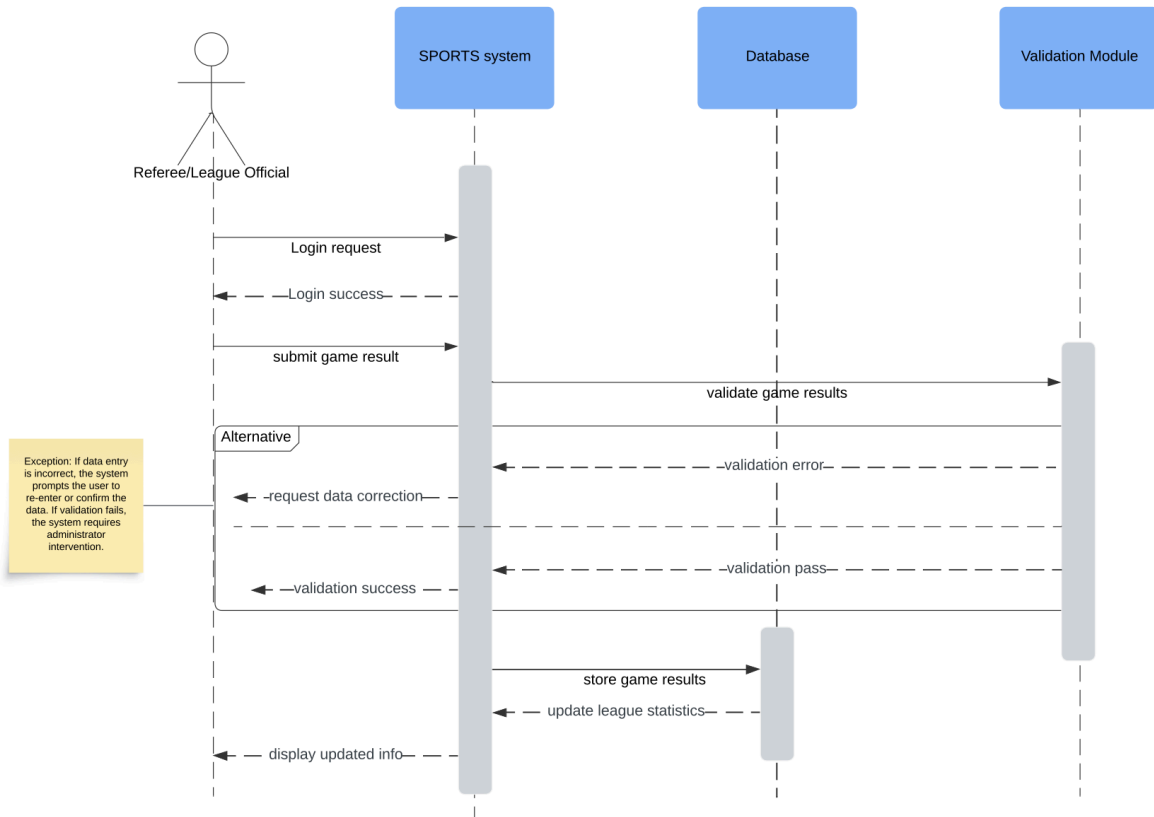

Use case 6: Monitor venue regulations and weather

Use case 7: Maintain match records and analyze standings

Use case 7: Maintain match records and analyze standings

Use case 8: Scheduling
League Matches at Venue
